

Generative Research and Development (Week 7)

February 20 - 27th 2025

<https://newsletter.generatecoll.com/p/generative-3d-art-tools-and-inspirations>

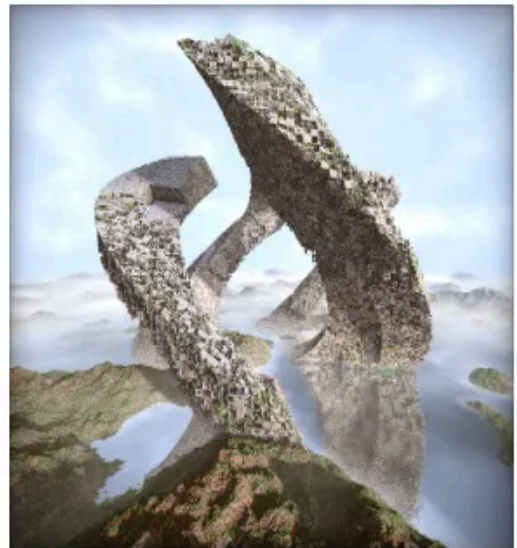

By: Chris Ried

This Concepts delves into the world of generative 3D art tools, allowing creative coders to create unique pieces using a 3D space, environment, or setting. Topics such as graphical 3D engines, procedural 3D engines, and other related tools are discussed to showcase what it's like to use these systems and how users can leverage them to improve their work. According to the creator, generative art can be achieved in almost every application, highlighting how art can be created in diverse ways, with 3D spaces being one of them. The article demonstrates many techniques for creative coding in 3D spaces, which is amazing for someone like me, who loves 3D art.

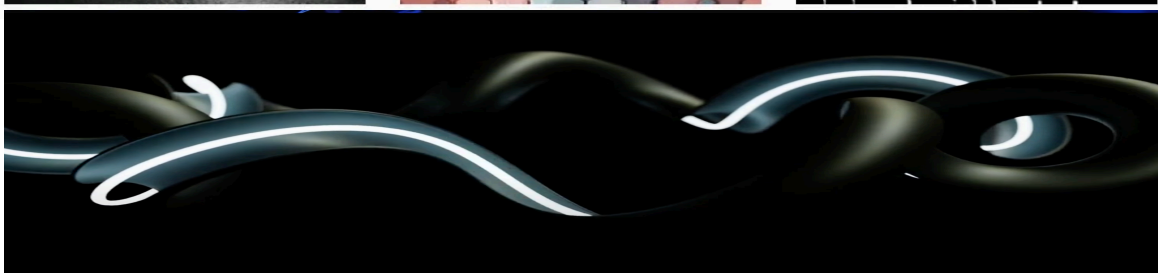

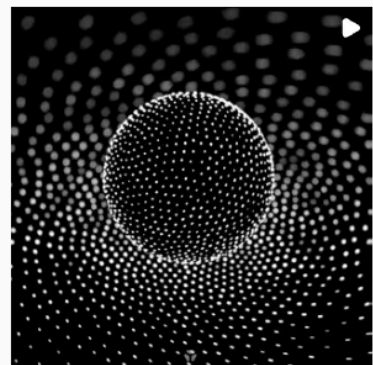

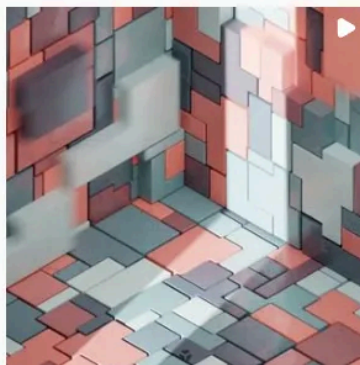

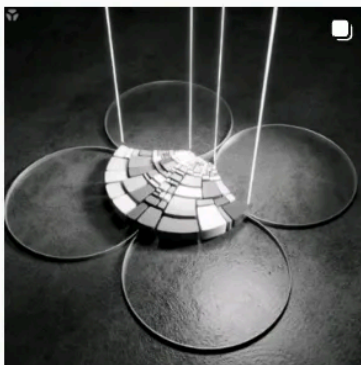

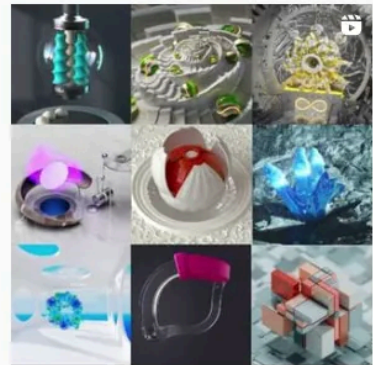

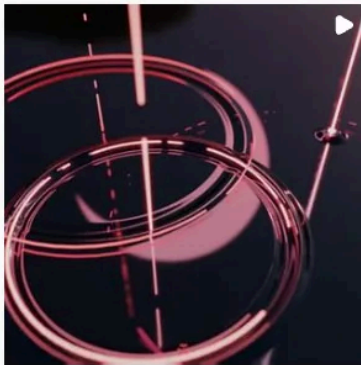

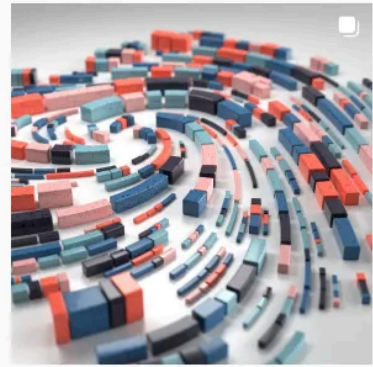

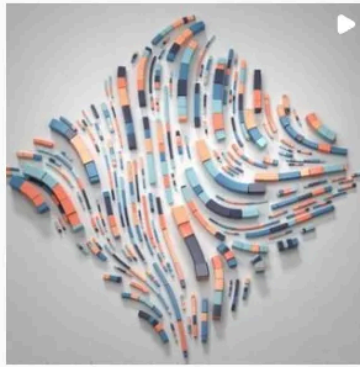

I am personally very interested in these forms of art and the tools used to create them. It has been incredibly helpful to learn about these techniques and see how I can use them to produce cool works while deepening my understanding of the field. The idea of exploring new tools and methods for creating 3D art is fascinating to me. Researching this area has provided valuable insights into graphical 3D engines and various 3D techniques, making it a highly useful resource for anyone interested in 3D art.
